LLIN Distribution Programme – Detailed Information

Summary

| # of LL | INS | Country | Location | When | By whom |
|---------|-----|-----------|---|-----------------|---------------|
| 3,50 | 0 | Nicaragua | Sahsa (Tasba Pri), Región Autónoma Atlantico Norte (RAAN) | October 2007 | PCI/Nicaragua |

Further Information

1. Please describe the specific locations & villages to receive nets and the number to each? Please provide longitude/latitude information. (Important note: If the distribution is approved, approval will be for the nets to be distribution to these specific locations. Location changes will only be considered, and may be refused, if due to exceptional/unforeseen circumstances.)

PCI will concentrate its distribution in the area of Sahsa (indigenous population affected 26,000), that have access by tertiary road, is 2 days away from Managua, the capital city. It has 49 villages and distribution will take place among these located in the Tasba Pri (free land), which are located on Nicaragua's northeast "Miskito Coast," in the "Región Autónoma Atlantico Norte" (RAAN). It's coordinates are as follows: Longtitude: 85° 1' 60W/Latitude: 14° 34' 60N. A total of 1-2 nets will be distributed to each family as needed. See list attached at end of form.

2. Is this an urban or rural area and how many people live in this specific area?

The RAAN is primarily a rural area, and has a total population of 314,130 (PAHO, 2005). While distribution will be centered in the town of Sahsa (indigenous population affected 26,000), PCI's operations will extend to the surrounding areas where the populations are primarily Miskito Indians and have been affected by the rising levels of flooding.

3. Is this a high risk malaria area? If yes, why do you designate it as high?

Yes. With 10.2 API (number of positive cases per capita), the Autonomous Northern Atlantic Region (RAAN) is considered by PAHO as one of the two areas within Nicaragua that are at high-risk for malaria. In addition, RAAN was declared to be in 'state of disaster' by the national government after was hit and destroyed by Hurricane Félix, leaving thousands of people affected, 67 confirmed deaths, and large damage to private and public property, including all the harvest that was destroyed. This, combined with tropical humidity and high temperatures creates high risk conditions for malaria outbreaks. 4. How many *reported* cases of malaria and malaria deaths were there in this area in 2005? If you do not have statistics please make a qualitative comment.

An average of 1,400 cases of Malaria per year has been notified by the Ministry of Health of Nicaragua. This Region is well known because the high prevalence of Malaria caused by Plasmodium Falciparum. As par of the fight against Malaria, treated mosquito net has been successful in reducing the Malaria.

5. Is this distribution of nets 'blanket coverage' of an area/village or to a select/vulnerable group? If the latter, please describe this group.

Select vulnerable group - Indigenous/Sahsa and other hurricane victims. The selection will be done in the field, base on current situation of Malaria and conditions where typically has occurred more cases, because now the conditions are more likely to increase the incidence of the disease due to the current flooding area.

6. What is the existing level of ITN use in this area? Are there existing bednet distribution programmes in this area?

With the aid of the Global Fund the Ministry of Health together with NGO was implementing in certain communities the ITN. The last report we had demonstrated a huge impact in reduction of the high incidence of malaria.

7. Why was the area/villages chosen for bednet distribution and who made this decision? Please provide the name, position and organisation of the person/s making the decision.

All the area in the Caribbean was affected by Hurricane Félix, we selected Sahsa because it is one of the most remote communities and is not easily accessible, also because of the high incidence of Malaria previous to the natural disaster and because we have local partners working in this area that will help us to select the right beneficiaries and the follow up. Dr. Leonel Arguello, PCI Country Director in Nicaragua, Former chief of Epidemiology in the Country.

8. Have you **consulted with the National Malaria Programme** in your country about this distribution and what was their response? Please provide the name, position and contact details of the person/s with whom you have liaised.

Dr. Francisco Acevedo, head of Malaria Program in the Ministry of Health. He supports the distribution of ITN. Phone +505-2894700.

9. Please describe any **pre-distribution activity**, in particular how the size of the target group and number of nets required will be ascertained?

Before we received the ITN, we will review the epidemiological data of the villages available at the regional or national level, we will select the most affected and review the current situation of the population affected. The distribution per house or per family (because the majority of them lost their houses and live in temporal settlement) will be done, taking into account the number of family members and mostly the number of beds or similar that they are using to sleep.

10. Please describe how the bednets will be distributed, by whom, whether distribution will be a focussed effort or part of a combined programme and if there will be an information/education component to the distribution? Please indicate over what time period (typically, the number of days or weeks) the distribution will occur.

After 10 days of the disaster the mosquito population will grow and then the number of malaria cases will increase. PCI Nicaragua together with AMC (local NGO working in those communities for at least 10 years) will be distributed. This will be part of a hygiene educational program that PCI will implement in this area. A basic training for ITN use, maintenance and the importance of using them will be develop with local indigenous group and with the aid of natural leaders and key persons in the community. The cultural aspect will be respected and local health volunteers (already trained in health) will be key for the implementation phase.

11. What **post-distribution follow-up** is planned to assess the level of usage (hang-up percentage) of the nets? How long after the distribution will this assessment take place? Will you provide us with the findings? What will you be able to do subsequently to increase net hang-up if relevant?

Due that PCI Nicaragua will focus efforts in this community (Sahsa) during the next 9 months, the local health volunteers (already trained in health) will be key for the monitoring of level of usage and impact. PCI together with a Private enterprise will obtain around 1,500 ITN that will complement the donation. The distribution will be done in a period of 15 days, previous that we will train the community. We expect to have information regarding the acceptance, % of family that use the ITN. The monitor will be done every 3 months up to 3 times.

12. Please give the name and contact information for the (government) head of the district health management team for the/each area. Please ensure you include contact information.

Dr. Juan José Amador, Ministry of Health of Nicaragua. Due to current disaster he is coordinating the communicable disease program. The health center at local level was destroyed. Medical brigades are coming into the communities. Phone; 505-8864809. Address: Ministerio de Salud de Nicaragua, Conchita Palacios. Managua, Nicaragua.

13. Please confirm the nets will be distributed free-to-recipients, a requirement for us to fund nets.

The nets will be distributed at no-cost to recipients.

14. Please confirm you will send us, post-distribution, at least 40 digital photos per sub-location, taken at the distribution/s, to be added to our website as we report on the distribution to donors.*

We confirm that at least 40 digital photos per sub-location will be taken and sent to you.

15. Please indicate if you will be able to provide video footage from each sublocation. This is not mandatory but is preferred and aids reporting to donors and encourages further donor giving.*

Every attempt will be made however in this emergency instance it is unlikely.

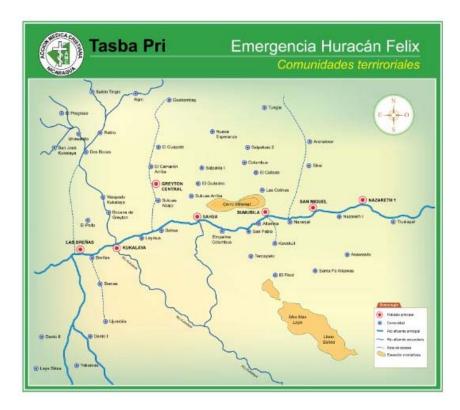

16. Please confirm you will send a **Post-Distribution Summary** when the distribution is complete.*

Confirmed.

17. Please provide your name, role and organisation and full contact information.

Leonel Arguello, PCI Nicaragua Country Director. Phone: 505-2663740, 505-2663748, 505-8834400, leonel AT ibw.com.ni P.O. Box 3523, Managua, Nicaragua. Physical address: Del Canal 4 de TV 75 varas al Sur. Edificio El Carmen. Bo. Bolonia, Managua, Nicaragua.

*Information on providing photos, video and a Post-distribution Summary is included in the attached document.
